Dan White is an Assistant Professor with Valparaiso University in Indiana where he teaches electronics and other electrical and computer engineering topics. He holds an Amateur Extra license, AD0CQ, and interestingly issued on 2012-12-12. Interests include analog and mixed-signal processing and circuits from single-hertz through giga-hertz frequencies at low power. Before joining the faculty at Valpo, he consulted and customized professional audio equipment as White Audio. He strongly believes that the experimental aspects of the Amateur Radio Service can be a vehicle and inspiration for training the next generation of engineers.
